

Yahya Sleiman

Data Analyst | Business Intelligence | SQL · Power BI · Python

+966 54 404 021 | yahyasleiman01@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Career-changer and aspiring Data Analyst with a proven track record of independently building production-grade business intelligence solutions. Proficient in SQL, Python, DAX, and Power BI, demonstrated across seven self-initiated analytics projects spanning insurance, hospitality, finance, retail, and supply chain domains. Holds the Microsoft PL-300 (Power BI Data Analyst Associate) certification and IBM Full Stack Developer credential. Six years of operational experience managing high-volume, customer-facing environments has developed a sharp instinct for translating messy business problems into clear, actionable data insights. Actively seeking a first professional data analyst role where technical skills can deliver immediate business value.

TECHNICAL SKILLS

Analytics & BI	Power BI, DAX, Power Query, Excel (PivotTables, VLOOKUP, Power Pivot), KPI Design, Dashboard Reporting
Programming	Python (pandas, matplotlib, seaborn), SQL, MySQL, queries, joins, aggregations, window functions, stored procedures
App Frameworks	FastAPI, Streamlit, REST API integration, full-stack deployment
Data Engineering	Star Schema modelling, dimensional modelling, data cleaning, ETL, reporting views
Productivity	Microsoft 365 Copilot, Word, Excel, PowerPoint

CERTIFICATIONS

- **Microsoft Certified: Power BI Data Analyst Associate (PL-300)**; proctored exam validating end-to-end BI solution design, DAX, and data modelling
- **IBM Full Stack Software Developer Professional Certificate**; Python, APIs, databases, and cloud deployment
- Microsoft Certifications: Microsoft 365 Copilot, Excel, Word, PowerPoint
- SQL, Power BI, Python & Data Analytics learning paths, Codebasics & Microsoft Learn

WORK EXPERIENCE

Data Analytics Virtual Intern | [Codebasics \(Remote\)](#)

2026

- Delivered 5 end-to-end Power BI projects as part of a structured, industry-aligned analytics program, each replicating real client briefs across insurance, hospitality, finance, sales, and supply chain domains.
- Applied SQL and MySQL for data extraction and transformation; used Power Query for ETL pipelines and DAX for calculated measures, KPIs, and time-intelligence reporting.
- Published live interactive dashboards accessible via Power BI Service, demonstrating end-to-end delivery from raw data to stakeholder-ready reporting.

Operations & Service Coordinator | [Hospitality & Catering Sector, Lebanon/KSA](#)

2019 – 2025

- Managed service operations for events of 3,000+ attendees, coordinating multi-team logistics, supplier communications, and real-time problem-solving under pressure.
- Developed hands-on fluency with the business questions data analysts are asked to answer, including revenue performance, customer throughput, capacity utilization, and cost control, translating that domain knowledge directly into analytics work.
- Voluntarily transitioned into data analytics through self-directed study, independent project development, and professional certification, demonstrating initiative, learning agility, and commitment to career change.

DATA ANALYTICS PROJECTS

Shield Insurance Analytics | [Power BI · SQL · DAX](#) → [GitHub Repository](#) | [Live Dashboard](#)

- **Business problem:** Identify revenue leakage and customer churn patterns across a national insurance portfolio.
- Designed three interconnected Power BI dashboards analyzing 26,000+ customers and 989M+ in premium revenue covering customer segmentation by age/city/policy, claims settlement rates, and sales channel performance.
- **Outcome:** Enabled drill-down from executive summary to transaction level; surfaced that the 31–40 age group generated 35%+ of revenue, informing targeted retention strategy.

Business Insights 360 | [Power BI · SQL · MySQL](#) → [GitHub Repository](#) | [Live Dashboard](#)

- **Business problem:** Give a multi-national FMCG company a single source of truth across five business functions.
- Engineered a star schema data model across 1.8M+ rows, integrating Finance (P&L, gross margin), Sales (net revenue, market share), Marketing (campaign ROI), and Supply Chain (forecast accuracy, out-of-stock risk) into one unified Power BI solution.
- **Outcome:** Reduced cross-functional reporting from multiple siloed spreadsheets to a single self-service dashboard used by simulated stakeholders across four departments.

Hospitality Revenue Analytics | [Power BI · Excel · DAX](#) → [GitHub Repository](#) | [Live Dashboard](#)

- **Business problem:** Diagnose declining RevPAR across a hotel chain and identify underperforming properties.
- Built dashboards analyzing 132,000+ bookings and 1.6B+ in revenue across occupancy rate, ADR, RevPAR, cancellation rate, and booking platform performance, with week-over-week trend analysis.
- **Outcome:** Pinpointed that weekend occupancy outperformed weekdays by 18pp, and those direct bookings had 40% lower cancellation rates than third-party platforms — actionable pricing and channel insights.

Expense Tracking Analytics System | [Python · FastAPI · Streamlit · MySQL](#) → [Live Demo](#) | [GitHub Repository](#)

- **Business problem:** Build a real-time personal and business expense analytics tool deployable as a web application.
- Developed a full-stack application with MySQL backend, FastAPI REST endpoints, and a Streamlit frontend featuring interactive category breakdowns, monthly trends, and budget-vs-actual comparisons.
- **Outcome:** Live deployed app demonstrating end-to-end data engineering and product thinking, from schema design to user-facing dashboard.

AI-Powered Business Analytics Dashboard | [Python · FastAPI · Streamlit · MySQL](#) → [Live Demo](#) | [GitHub Repository](#)

- Built an analytics platform with automated KPI monitoring, trend visualization, and statistical anomaly detection, integrating AI-generated narrative summaries via API to contextualize data movements for non-technical users.

SQL Sales & Retail Analytics | [SQL · MySQL](#) → [GitHub Repository 1st project](#) | [GitHub Repository 2nd project](#)

- Designed two SQL-only analytics systems covering 300+ orders across normalized schemas with 8+ relational tables applying joins, aggregations, window functions, CTEs, stored procedures, and automated reporting views to produce business performance insights without a BI layer.

EDUCATION

Lebanese Baccalaureate — General Science | High School Ouyoun, Akkar, Lebanon

2018

Graduated with distinction

Note for recruiters: All technical skills and certifications listed in this CV were acquired through self-directed study and applied independently through project work, not through formal university education. Portfolio and GitHub repositories are available for review at yahya-datafolio.netlify.app.
